DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 8-20-09 has been entered.

Allowable Subject Matter

Claims 1, 3-9, 11 and 14-25 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art taken alone or in combination fails to anticipate or fairly suggest the limitations of the claims, in such a manner that a rejection under 35 USC 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in independent claims 1, 14, 15 and 21.

Specifically regarding claim 1, Berge et al. (6369954) teaches the state of the art of an electrowetting module.

But, Berge et al. fails to explicitly teach a combination of all the claimed features including a compound having a higher molecular weight than said first fluid, said

compound containing symmetric molecules and having a zero dipole moment, wherein a density of said second fluid including said compound of higher molecular weight is substantially similar to a density of said first fluid, as claimed.

Specifically regarding claim 14, Berge et al. (6369954) teaches the state of the art of an electrowetting module.

But, Berge et al. fails to explicitly teach a combination of all the claimed features including at least one of the fluids comprises a liquid containing a compound containing molecules having a zero dipole moment in the liquid phase, wherein the liquid comprises a compound containing symmetric molecules, as claimed.

Specifically regarding claim 15, Berge et al. (6369954) teaches the state of the art of an electrowetting module.

But, Berge et al. fails to explicitly teach a combination of all the claimed features including at least one of the fluids comprises a liquid containing a compound containing molecules having a zero dipole moment in the liquid phase, wherein the compound is at least one of an organic compound, an organometallic compound, a germanium-based compound and a silicon-based compound, being symmetrically substituted, as claimed.

Specifically regarding claim 21, Berge et al. (6369954) teaches the state of the art of an electrowetting module.

But, Berge et al. fails to explicitly teach a combination of all the claimed features including at least one of the fluids comprises a liquid containing a compound containing molecules having a zero dipole moment in the liquid phase, the first and said second fluid bodies having different refractive indices, wherein the compound added to the liquid has a refractive index difference increasing effect, as claimed.

As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
